

# Contents

<b>1</b>	<b>Introduction to the Book</b>	<b>3</b>
1.1	Introduction to QuantStart	3
1.2	What is this book?	3
1.3	Who is this book for?	3
1.4	What are the prerequisites?	4
1.5	Software Requirements	4
1.6	Book Structure	5
1.7	What the book does not cover	6
1.8	Where to get help	6
<b>2</b>	<b>Introduction to C++</b>	<b>7</b>
2.1	A Brief History Of C++	7
2.2	The Advantages Of C++	7
2.3	The Disadvantages Of C++	8
2.4	The Different Components Of C++	8
2.5	C-Style Procedural Programming	9
2.6	Object-Oriented Programming	9
2.7	Generic Programming	10
2.8	The Standard Template Library (STL)	10
2.9	The Boost Libraries	11
2.10	C++ In Quantitative Analysis	11
2.11	C++ In This Course	12
<b>3</b>	<b>Your First Quantitative Finance C++ Program</b>	<b>13</b>
3.1	Components Of An Object-Oriented C++ Program	13
3.2	What Are Classes?	14
3.3	Constructors And Destructors	14
3.4	Selectors And Modifiers	15

3.5	European Vanilla Option Specification . . . . .	16
3.6	VanillaOption Header File . . . . .	17
3.7	VanillaOption Source File . . . . .	20
3.8	Passing By Reference Or Value . . . . .	25
<b>4</b>	<b>Option Pay-Off Hierarchies and Inheritance . . . . .</b>	<b>27</b>
4.1	Inheritance In Quantitative Finance . . . . .	27
4.2	Option Pay-off Hierarchies . . . . .	28
4.3	Implementing The PayOff Base Class . . . . .	29
4.4	PayOff Header File . . . . .	29
4.5	PayOffCall Header . . . . .	30
4.6	PayOffDoubleDigital Header . . . . .	31
4.7	PayOffCall Source File . . . . .	32
4.8	PayOffDoubleDigital Source File . . . . .	32
4.9	Virtual Destructors . . . . .	33
<b>5</b>	<b>Generic Programming and Template Classes . . . . .</b>	<b>37</b>
5.1	Why Generic Programming? . . . . .	37
5.2	Template Classes . . . . .	37
5.3	A Matrix Template Class . . . . .	38
5.4	Template Syntax and Declaration . . . . .	38
5.5	Default Types in Templates . . . . .	39
5.6	SimpleMatrix Declaration . . . . .	40
5.7	SimpleMatrix Implementation . . . . .	43
5.8	Generic Programming vs OOP . . . . .	47
<b>6</b>	<b>Introduction to the Standard Template Library . . . . .</b>	<b>49</b>
6.1	Components of the STL . . . . .	49
6.2	Containers . . . . .	50
6.2.1	Sequence Containers . . . . .	50
6.2.2	Associative Containers . . . . .	51
6.2.3	Container Adaptors . . . . .	52
6.3	Iterators . . . . .	52
6.3.1	Iterator Categories . . . . .	52
6.3.2	Iterator Adaptors . . . . .	53

6.3.3	Const Iterators . . . . .	54
6.3.4	Iterator Traits . . . . .	55
6.4	Algorithms . . . . .	55
6.4.1	Algorithm Categories . . . . .	55
6.4.2	Nonmodifying Algorithms . . . . .	56
6.4.3	Modifying Algorithms . . . . .	57
6.4.4	Removal Algorithms . . . . .	58
6.4.5	Mutating Algorithms . . . . .	59
6.4.6	Sorting Algorithms . . . . .	59
6.4.7	Sorted Range Algorithms . . . . .	60
6.4.8	Numeric Algorithms . . . . .	61
6.5	C++11 STL . . . . .	62
6.5.1	Containers . . . . .	62
6.5.2	Algorithms . . . . .	62
<b>7</b>	<b>Function Objects . . . . .</b>	<b>65</b>
7.1	Function Pointers . . . . .	66
7.2	C++ Function Objects (Functors) . . . . .	68
<b>8</b>	<b>Matrix Classes for Quantitative Finance . . . . .</b>	<b>71</b>
8.1	Custom Matrix Class Library . . . . .	72
8.1.1	C++ STL Storage Mechanisms . . . . .	72
8.1.2	Matrix Mathematical Operations . . . . .	73
8.1.3	Full Declaration . . . . .	75
8.1.4	The Source File . . . . .	77
8.1.5	Allocation and Deallocation . . . . .	77
8.1.6	Mathematical Operators Implementation . . . . .	80
8.1.7	Full Source Implementation . . . . .	85
8.1.8	Using the Matrix Class . . . . .	92
8.2	External Matrix Libraries . . . . .	93
8.2.1	Installation . . . . .	94
8.2.2	Basic Usage . . . . .	94
8.2.3	Basic Linear Algebra . . . . .	95
8.2.4	Expression Templates . . . . .	95
8.2.5	Matrix and Scalar Arithmetic . . . . .	96

8.2.6	Matrix Transposition . . . . .	98
8.2.7	Matrix/Matrix and Matrix/Vector Multiplication . . . . .	99
8.2.8	Vector Operations . . . . .	100
8.2.9	Reduction . . . . .	101
8.2.10	Useful Features . . . . .	102
8.2.11	Next Steps . . . . .	102
<b>9</b>	<b>Numerical Linear Algebra . . . . .</b>	<b>103</b>
9.1	Overview . . . . .	103
9.2	LU Decomposition . . . . .	104
9.2.1	Algorithm . . . . .	104
9.2.2	Eigen C++ Implementation . . . . .	105
9.3	Thomas Tridiagonal Matrix Algorithm . . . . .	107
9.3.1	C++ Implementation . . . . .	108
9.4	Cholesky Decomposition . . . . .	112
9.4.1	Algorithm . . . . .	113
9.4.2	Eigen Implementation . . . . .	113
9.5	QR Decomposition . . . . .	115
9.5.1	Algorithm . . . . .	115
9.5.2	Eigen Implementation . . . . .	117
<b>10</b>	<b>European Options with Monte Carlo . . . . .</b>	<b>119</b>
10.1	Black-Scholes Analytic Pricing Formula . . . . .	119
10.2	C++ Implementation . . . . .	120
10.3	Risk Neutral Pricing of a European Vanilla Option . . . . .	126
10.4	C++ Implementation . . . . .	128
<b>11</b>	<b>Calculating the “Greeks” . . . . .</b>	<b>135</b>
11.1	Analytic Formulae . . . . .	136
11.2	Finite Difference Method . . . . .	142
11.3	Monte Carlo Method . . . . .	145
<b>12</b>	<b>Asian/Path-Dependent Options with Monte Carlo . . . . .</b>	<b>151</b>
12.1	Overview of Asian Options . . . . .	151
12.2	Asian Options - An Object Oriented Approach . . . . .	152
12.3	Pay-Off Classes . . . . .	154

12.4 Path Generation Header . . . . .	157
12.5 Asian Option Classes . . . . .	160
12.6 The Main Program . . . . .	164
<b>13 Implied Volatility . . . . .</b>	<b>169</b>
13.1 Motivation . . . . .	169
13.2 Root-Finding Algorithms . . . . .	170
13.3 Interval Bisection Method . . . . .	170
13.3.1 Interval Bisection with Function Templates . . . . .	171
13.3.2 C++ Implementation . . . . .	171
13.4 Implied Volatility via Newton-Raphson . . . . .	177
13.4.1 Newton-Raphson Method . . . . .	177
13.4.2 Pointer to a Member Function . . . . .	178
13.4.3 Implementing Newton-Raphson . . . . .	179
<b>14 Random Number Generation and Statistical Distributions . . . . .</b>	<b>185</b>
14.1 Overview . . . . .	185
14.2 Random Number Generator Class Hierarchy . . . . .	186
14.2.1 Linear Congruential Generators . . . . .	189
14.2.2 Implementing a Linear Congruential Generator . . . . .	190
14.2.3 Implementation of the Main Program . . . . .	194
14.3 Statistical Distributions . . . . .	195
14.3.1 Statistical Distribution Inheritance Hierarchy . . . . .	196
14.3.2 Standard Normal Distribution Implementation . . . . .	197
14.3.3 The Main Listing . . . . .	202
<b>15 Jump-Diffusion Models . . . . .</b>	<b>205</b>
15.1 Modelling Jump-Diffusion Processes . . . . .	205
15.2 Prices of European Options under Jump-Diffusions . . . . .	206
15.3 C++ Implementation . . . . .	207
<b>16 Stochastic Volatility . . . . .</b>	<b>211</b>
16.1 Motivation . . . . .	211
16.2 Process for Correlated Path Generation . . . . .	212
16.3 Cholesky Decomposition . . . . .	213
16.4 C++ Implementation . . . . .	213

16.5 Mathematical Model . . . . .	219
16.6 Euler Discretisation . . . . .	220
16.6.1 Correlated Asset Paths . . . . .	222
16.6.2 Monte Carlo Algorithm . . . . .	222
16.7 C++ Implementation . . . . .	223
16.7.1 PayOff Class . . . . .	223
16.7.2 Option Class . . . . .	223
16.7.3 Statistics and CorrelatedSND Classes . . . . .	225
16.7.4 HestonEuler Class . . . . .	225
16.7.5 Main Program . . . . .	227
<b>17 Single Factor Black-Scholes with Finite Difference Methods . . . . .</b>	<b>233</b>
17.1 Black-Scholes PDE for a European Call Option . . . . .	234
17.2 Finite Difference Discretisation . . . . .	235
17.3 Implementation . . . . .	236
17.3.1 PayOff Class . . . . .	237
17.3.2 VanillaOption Class . . . . .	239
17.3.3 PDE Classes . . . . .	241
17.3.4 FDM Class . . . . .	244
17.3.5 Main Implementation . . . . .	252
17.4 Execution and Output . . . . .	254
